TECHNOLOGIES®

The Stage Mix is a portable, all-in-one personal monitoring / Front-of-House system designed for simplicity and ease of transport and setup. The system features Mix Back and Hear Back ready-to-use in an ATA style roll-away case. Ships pre-wired in a 12" deep rack with built-in power conditioning, front and back LED lighting, dry-erase scribble strips, and break-out panel. Simply add your choice of effects and speakers.

This complete monitoring system in a single 19 space rack offers free space allowing you the ability to add your own effects devices, in-ear monitoring systems (such as Freedom Back), or other essential equipment.

The passive split on the Mix Back's 16 input channels allows you to provide signal to the front of house without affecting your personal monitor mixes. Or use the Mix Back as the FOH mixer in smaller venues. "Set and forget" the matrix settings on Mix Back as you will have complete control on each personal Hear Back Mixer. Up to eight personal mixers can be connected to one Hear Back Hub. Along with in-ear monitoring, your mix is the same – no matter where you go! Venue set up is quick and easy with Stage Mix!
