miniature dynamic transducers
to achieve our signature sound

EXPERIENCE
The original innovators continuing to
build relationships and ensure your
best results from the concept

Sound is Everything

The **Future Sonics Atrio Series™** models are the result of more than three years of extensive research and development with today's top musicians, engineers, producers and audiophiles. The result is a miniature loudspeaker system that delivers all of the elements of your true sound. You are actually hearing the richness of the details, dynamics and even subtle tones of your audio program.

Listen for yourself.

Design

Ergonomic and effective designs that incorporate each element of the product into its overall performance allow Future Sonics' **Atrio Series™** professional earphones to be effective for anyone of any age – even children.

The Power of 1

You've heard all of the hype out there...so-called two-way, three-way, hybrid multiple driver designs. **The truth** is that armature products do not produce frequencies below 150Hz as effectively as **Future Sonics' MG5pro™** dynamic drivers found in our **Atrio Series™** products. The bottom line is that they produce the **TrueTimbre™** audio quality that delivers the audio signature the way your own ears would hear.

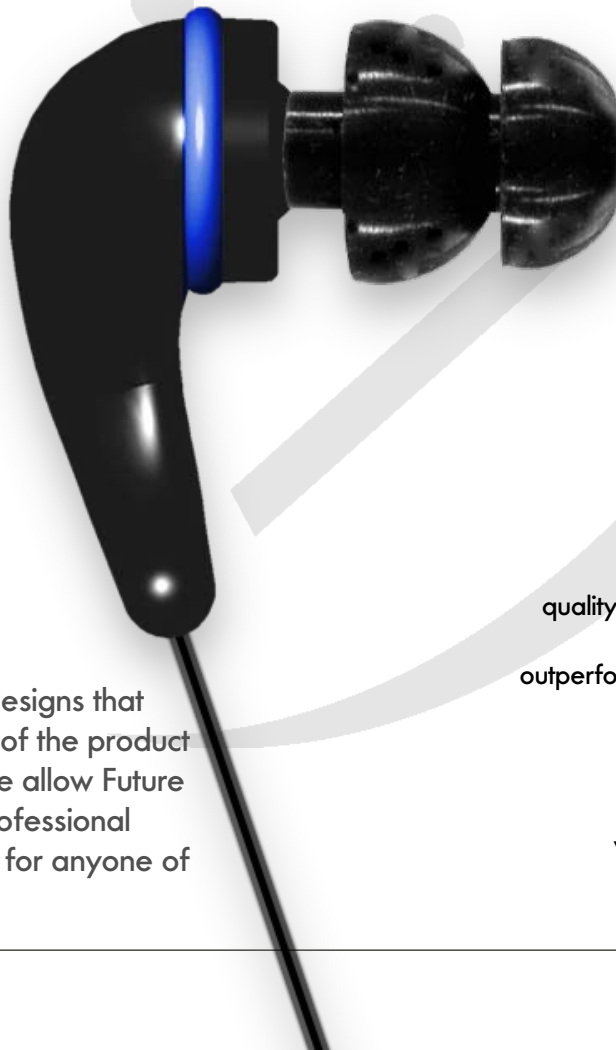

That is the Power of 1.

After more than twenty years of research, development and real-life experience, Future Sonics continues to develop innovative products that offer the finest audio quality available. Our products work with nearly any system or budget while outperforming other products at any price.

ATRIO SERIES™ • MODELS m5/m8 UNIVERSAL-FIT PROFESSIONAL EARPHONES

Future Sonics, the original innovators of personal monitors and professional audio performance earphones, presents the release of their new and greatly anticipated product line, **The Atrio Series™** (pronounced AYtree-oh). Built upon their latest MG5pro™ dynamic driver technology, the new line will feature products specifically designed for **live performance, recording studio, multimedia and broadcast** applications.

The Atrio Series™ continues our tradition of outstanding signature sound quality, reliability and client services, while featuring completely new designs and technologies specifically created to address the demands of top performers, engineers and production staff. As the concept of personal monitor systems continues to grow in the marketplace, The Atrio Series™ will be an excellent upgrade and/or enhance the quality of any existing personal monitoring system.

Like the company's flagship **Ear Monitors®** brand personal monitors – the very first professional earphones specifically designed with a custom-molded fit for live performance applications – The Atrio Series™ offers our signature audio quality to those needing a universal-fit product. An affordable option for personal monitors, as backup, for visitors or house of worship & education applications.

The Atrio Series™ is recognized by **H.E.A.R.** as a product offering its full range of sound and performance at even the lowest volumes.

"H.E.A.R. applauds Future Sonics' new professional earphones as a significant step forward in hearing conservation due to increased clarity across a broad range that measurably reduces the need for excessive amplification."

- Kathy Peck, Director of H.E.A.R.
