

PRO CONNECT DEBUTS AT INFOCOMM 2024

The new universal app makes updating, controlling Hear Back PRO simple

Web-based control provides accessibility regardless of device or OS

06/03/2024 - Hear Technologies is proud to debut the PRO Connect application, our new control center for all things Hear Back PRO. This new desktop application combines the features of multiple legacy apps and tools while adding an abundance of new functionality. PRO Connect provides a user-friendly interface to update, configure, and control your PRO Mixers and PRO Hubs. It is the perfect digital companion to our extraordinary flagship personal monitoring system.

PRO Connect provides loads of features with just a click or two of a mouse or touch screen:

Matrix Mixing & Submixing: Create different layouts for each musician by mapping audio sources to knobs on a per-mixer basis.

Multiple Mobile Users: PRO Connect provides a mobile, browser-based interface to allow multiple users to control their mix. Just connect to the same Wi-Fi network and pull up the app in your device's browser.

Session Management: Save settings for all Mixers from a session or band and recall those settings through a simple interface.

All-in-one Updater: We enabled firmware updates for the PRO Hub via Ethernet, wrapped in the Mixer update utility, and brought in new tools such as the Mixer Digital Overlay updater. PRO Connect provides new online versions automatically.

Visual Hub Configuration Wizard: PRO Connect provides a new visual tool to more easily configure your Hub. Add virtual cards to a virtual Hub to match your setup and send settings to the Hub automatically over Ethernet.

Channel and Mixer Naming: You can link stereo channels, name Mixers, and name individual channels for display on your Mixer Digital Overlays.

Channel Soloing: Solo a channel with the click of a button to isolate it from the rest of the mix.

Mixer Grouping/Mirroring: Group PRO Mixers to activate mirroring, a special mode that keeps all Mixers within a group synched. Change your mix on one Mixer and it reflects on the other Mixers.

Improved Metering: The Hear Back PRO Hub page includes an improved, more accurate, input channel meter display.

Compressor/Limiter: Adjust threshold, attack, and release of the onboard limiter of each mixer.

We are excited about the new application and hope you will be too! Be sure to drop by the Hear Technologies booth (C9307) at InfoComm Show June 12-14 to try out the PRO Connect and all the Hear Technologies personal headphone control systems for yourself.

ABOUT HEAR TECHNOLOGIES

Hear Technologies designs and manufactures pro audio equipment which improves live sound, recording, worship, and home studio environments. With over two decades of engineering experience, our innovative approach to new designs keeps us at the forefront. Our extraordinary-sounding knob-based personal monitoring control systems make individual headphone and in-ear mixing easy.
